

NTX FAASTeam presents:

Carbon Monoxide - It Is A Gas!

Is carbon monoxide a threat to you when flying? Are you sure? When was the last time you thoroughly and properly checked? The combustion engine in the airplane you fly creates colorless and odorless carbon monoxide (CO). This CO can inadvertently enter the cabin area and pose a serious threat while flying. Mike Montefusco will be here to teach us all about this potentially deadly and silent killer and how you can improve your chances of not having carbon monoxide poisoning happen to you. EAA Chapter 1556 will provide breakfast at 8:30am and the presentation will begin at 9am.

Directions: From Highway 82 turn north on Weber Dr, at the Tee in the road turn right and immediately turn left. Parking will be at the Gainesville Municipal Airport Terminal Building (Red Brick/Green Roof). Walk around the left side of the terminal building and the Ayers Aviation Hanger is the first hanger on the north side of the terminal building.
